## Skills

---

**Languages:** Python, SQL, JavaScript, TypeScript, Java, C/C++, GO, C#

**Cloud & DevOps:** AWS, Azure, Terraform, Kubernetes, Docker, Lambda, Jenkins, Sentinel, Github Actions

**Frameworks & Dev Tools:** Linux, Bash, Node.js, FastAPI, Pandas, XGBoost, PostgreSQL, Databricks, Git

**Certifications:** Amazon Certified Cloud Practitioner, IBM Data Analytics

## Experience

---

### Interac Corp.

Toronto, ON

*Software Developer Intern*

Sep 2026 – Dec 2026

- Building a serverless **AWS** automation using **Lambda**, CloudWatch, API Gateway, and SSM to identify idle non-production ECS/RDS environments and send Teams-based shutdown recommendations for engineer approval, with a POC projecting a **60-65%** reduction in non-prod compute costs while operating for under **\$10/month**.
- Automating tag governance across **16,000+ AWS resources** through a centralized workflow using Python (**boto3**), AWS Config, and Sentinel, identifying missing required tags, blocking non-compliant **Terraform** deployments through policy-as-code checks, and developing bulk remediation for existing non-compliant resources.

### Bank of Montreal (BMO)

Toronto, ON

*Software Developer Intern*

May 2026 – Aug 2026

- Modernized deployment infrastructure for a legacy banking application by migrating source control to Git and building a **Jenkins, Ansible, and Kubernetes CI/CD pipeline** to automate builds and deployments across environments
- Built a proof-of-concept approval tool for client-facing materials like pitchbooks, market updates, and sales decks using **Databricks**, Python, and SQL to validate client, product, and region requirements, with **Azure OpenAI** flagging potentially incomplete submissions and recommending the right Compliance or Legal review queue.

*Software Developer Intern*

May 2025 – Aug 2025

- Built an ETL pipeline using **Python, SQL**, Pandas, and PyPDF to extract and validate Book of Record account data into standardized PDF review packages, cutting manual data entry by **90%** and saving **15+ hours per batch**.
- Automated Excel reporting for business teams with an IBM Assembler, Python, and **Pandas** ETL pipeline that parses, validates, and transforms **1,000+** mainframe records into structured tables, reducing manual review by **40%**.

### MomentumMind

Mississauga, ON

*Full Stack Developer Intern*

May 2024 – Aug 2024

- Built and deployed a React, Tailwind, and **Node.js** app that uses Stripe Webhooks to confirm payments automatically in real time, replacing a manual transaction verification process that took **10 hrs/week**.
- Set up a **GitHub Actions CI/CD** pipeline to automate deployments, with schema validation that catches database errors before release, and optimized slow **PostgreSQL** inventory queries by adding indexes.

## Leadership / Extracurricular

---

### Western Cyber Society

Sep 2024 – Apr 2026

*Project Manager & Lead Software Developer*

London, ON

- Led a team of **5** in Agile sprints to build a real-time credit risk evaluation platform with a React frontend, FastAPI microservices, and an XGBoost model served with **ONNX** Runtime in **Docker**, achieving **<50ms** latency.
- Implemented explainable AI using **SHAP** to provide feature-level transparency for credit decisions, persisting risk scores and explanations in IBM Db2 to support auditability, compliance, and downstream analysis.

## Projects

---

### NBA Fantasy App - AI NBA Player Stat Predictor

- Built an end-to-end ML application with an automated Node.js ETL pipeline and PostgreSQL to support an **XGBoost** model, reducing prediction RMSE by **18%**, and developed a responsive TypeScript frontend deployed on **AWS EC2** with a Streamlit dashboard for real-time projection and model accuracy tracking.

### Equity Matching Engine - Exchange Observability Platform

- Deployed a distributed FastAPI order-matching platform on **Kubernetes** handling **2K+ orders/sec**, implementing **OpenTelemetry** distributed tracing, Prometheus-based SLO monitoring, and **Grafana** dashboards integrated with Tempo to investigate latency spikes and injected failure scenarios under synthetic load.

### Amazon Price Tracker Web Scraper

- Built a full-stack price tracker with a **FastAPI** backend that scrapes Amazon products using **BeautifulSoup**, stores them in SQL, and serves a Next.js frontend with interactive D3.js charts of historical price trends for each product.

## Education

---

### University of Western Ontario

Expected Graduation: April 2028

*Bachelor of Software Engineering*

London, ON

- Relevant Courses: Algorithms and Data Structures, Object-Oriented Programming, Operating Systems
